

9/22 Time:	Existing Model	Proposed Model
8:00 AM	 An aerial perspective of a residential lot with three buildings. The sun is low in the sky, casting long, dark shadows from the buildings and trees onto the green lawn. The shadows are oriented towards the northwest.	 An aerial perspective of the same residential lot with the proposed building layout. Long shadows are cast from the buildings and trees, indicating the low sun position at 8:00 AM.
10:00 am	 An aerial perspective of the existing model at 10:00 AM. The shadows are shorter than at 8:00 AM and are cast more directly beneath the buildings and trees.	 An aerial perspective of the proposed model at 10:00 AM. The shadows are shorter and more vertical, showing the sun is higher in the sky.
12:00 pm	 An aerial perspective of the existing model at noon. The shadows are at their shortest, cast almost directly beneath the buildings and trees.	 An aerial perspective of the proposed model at noon. The shadows are very short, indicating the sun is at its highest point.
2:00 PM	 An aerial perspective of the existing model at 2:00 PM. The shadows are longer than at noon and are cast towards the southwest.	 An aerial perspective of the proposed model at 2:00 PM. The shadows are longer and cast towards the southwest, similar to the existing model but reflecting the proposed building footprints.
